

Pretty Prints III

Assignment Description: In this assignment, a script file should be created to contain a set a SQL statements for the Pretty Prints Company to better manage their business. Use the database created for Pretty Prints in Assignment 2. Include the SQL statements to satisfy the following queries.

The following queries should be included in the script:

1. Create a view named Under_100. It consists of the item_id, title, artist, unit_price and order_qty for every print with a unit_price under 100 dollars.

```
CREATE VIEW Under_100 as  
SELECT items.item_id, title, artist, unit_price, order_qty  
FROM items, orderline WHERE items.item_id = orderline.item_id and unit_price < 100.00;
```

2. Create a view named Allen. It consists of the customer_id, customer_name, customer_phone, title, and artist of each print ordered.

```
CREATE VIEW Allen AS  
SELECT customers.customer_id, customer_name, customer_phone, title, artist FROM customers, items, orderline, orders  
WHERE customers.customer_id = orders.customer_id  
AND orders.order_id = orderline.order_id  
AND orderline.item_id = items.item_id;
```

3. Create a view named orders. It consists of the item_id, title, artist, unit_price and order_qty for every print ordered in the range of 2014-01-01 and 2014-02-28.

```
CREATE VIEW orders_view AS
```

```
SELECT orderline.item_id, title, artist, unit_price, order_qty FROM items, orderline, orders  
WHERE items.item_id = orderline.item_id  
AND orderline.order_id = orders.order_id
```

```
AND order_date BETWEEN '2014-01-01' AND '2014-02-28';
```

4. Create a view named zip_27. It consists of the customer_name, customer_phone, title, artist and date_shipped of each print ordered by a customer whose zip code begins with 27.

```
CREATE VIEW zip_27 AS
```

```
SELECT customer_name, customer_phone, title, artist, ship_date FROM customers, items, orders, orderline  
WHERE customers.customer_id = orders.customer_id  
AND orders.order_id = orderline.order_id  
AND orderline.item_id = items.item_id  
AND customer_zip LIKE '27%';
```

5. Create the following indexes. Use the indicated index name.
- a. Create an index named `customer_id` on the `customer_id` field in the `customers` table.
 - b. Create an index named `name` on the `customer_name` field in the `customers` table.
 - c. Create an index named `shipped` on the `customer_id` and `ship_date` in the `orders` table.

a. CREATE INDEX `customer_id`

ON `customers (customer_id)`;

b. CREATE INDEX `name`

ON `customers (customer_name)`;

c. CREATE INDEX `shipped`

ON `orders (customer_id , ship_date)`;

6. Drop the `name` index.

DROP INDEX `name` ON `customers`;

7. Specify the integrity constraint that the `unit_price` of any print must be more than \$35.

ALTER TABLE `items`

ADD CHECK (`unit_price > 35.00`);

8. Create the following foreign keys within the prints database.

a. customer_id is a foreign key in the orders table.

b. Item_id is a foreign key in the orderline table.

a. ALTER TABLE orders

a.1 ADD FOREIGN KEY(customer_id) REFERENCES customers(customer_id);

a. ALTER TABLE orderline

ADD FOREIGN KEY(item_id) REFERENCES items(item_id);

9. Add to the items table a new character field named type that is one character in length.

ALTER TABLE items

ADD type CHAR(1);

10. Change the type field in the items table to M for the print titled Skies Above.

UPDATE items

SET TYPE='M'

WHERE title = 'Skies Above';

11. Change the length of the artist field in the items table to 30.

ALTER TABLE items

MODIFY COLUMN artist CHAR(30);

12. What command would you use to delete the orders table from the prints database? (Do not delete the orders table.)

DROP TABLE orders;

REQUIREMENTS:

- ➡ Each student must work independently on this assignment. No group work is allowed.
- ➡ Submit completed work into Canvas.
- ➡ Take a screenshot of the submission verification in the event you need proof of submission.
